BUILDING AN EFFECTIVE PERSONAL STUDY PLANNER

Algorithm Artists

WHY DO WE NEED A STUDY PLANNER?

We need a system to organize studying effectively.

Main Points:

- Students feel overwhelmed
- Poor time management
- Lack of consistency
- Forgetting previously learned material

GOAL OF THE PLANNER

Goal = Study smarter, not just harder

- Organize study time
- Improve long-term memory
- Increase productivity
- Reduce stress
- Track progress

WHAT WE ARE BUILDING

Not just a calendar – a full system

Goal setting

Defines what the student wants to achieve in the long term and gives direction to the whole study plan

Task scheduling

Breaks goals into smaller tasks and organizes them into a clear plan of what needs to be done.

Time management

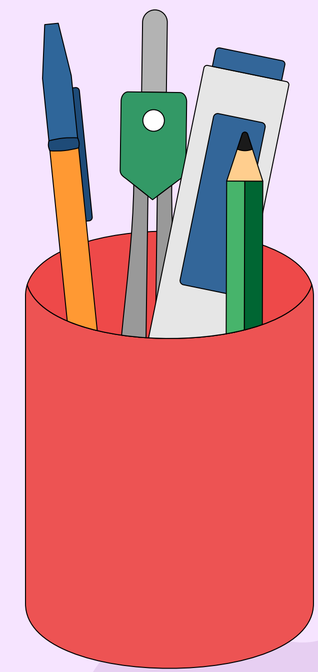
Allocates specific time periods for each task to ensure studying is structured and realistic.

Progress tracking

Monitors completed tasks and performance to show improvement and identify weak areas.

CORE STRUCTURE

1. Long-term goals → define direction
2. Weekly plans → organize content
3. Daily plans → manage time
4. Tasks → perform actions
5. Revision → reinforce learning
6. Progress tracking → measure results



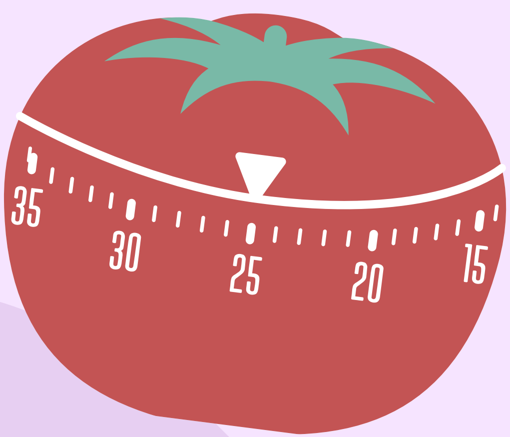
LONG-TERM GOALS

Break big goals into smaller parts

Define main objectives

Example:

- Finish Probability course
- Learn algorithms



WEEKLY PLANNING

Connecting Goals to Actions

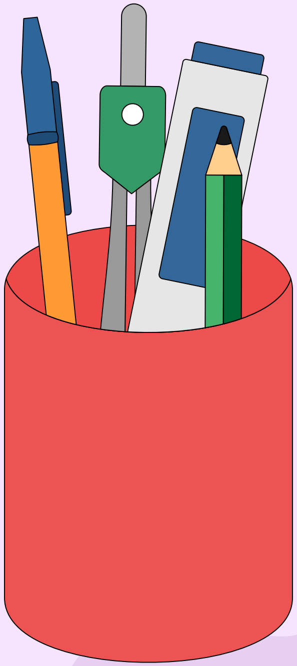
Divide goals into weekly topics
Balance workload
Include:

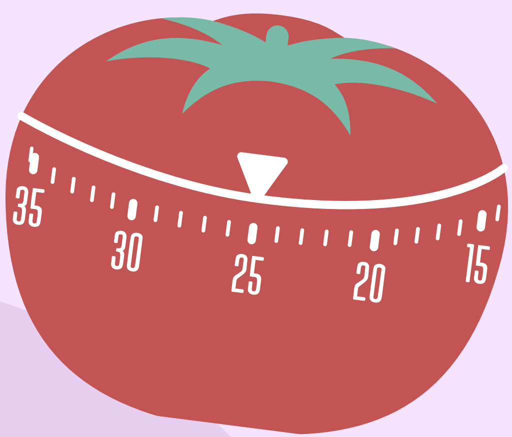
- Study: Learning new material
- Practice: Practicing problems
- Revision: Reviewing previous topics

DAILY PLANNING

Plan Each Day
Use time-blocking
Example:

- 10:00–11:00 → Theory
- 11:15–12:00 → Practice
- 18:00 → Review





PROGRESS TRACKING

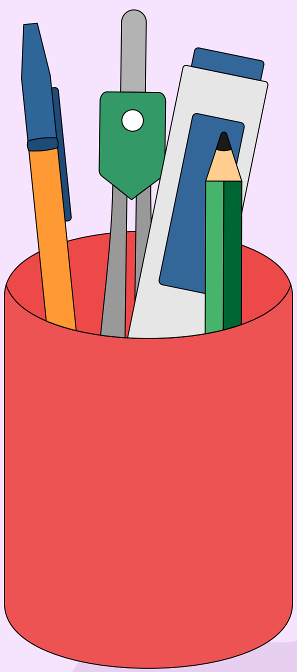
Measure Your Work

- Checkboxes ✅
- Completion %
- Notes on weak areas

UML DIAGRAM

TECHNICAL SIDE

1. Web development techniques → build user interface with JavaScript(HTML, CSS)
2. Backend logic → manage system functionality(Node.js).
3. Database concepts → store and organize data with MySQL.
4. UI/UX design → ensure usability and clarity
5. System design → connect all components. Design Patterns such as MVC, Singleton Pattern, Observer and Factory Patterns.



DESIGN PATTERNS

Singleton pattern

Composite pattern

Observer pattern

Strategy pattern

Factory pattern

COMMON MISTAKES

What to Avoid:

- Overloading schedule
- Setting unclear or vague goals
- No revision
- Not tracking progress

FINAL RESULT

What does the system achieve?

Organized study process

Better time management

Improved learning outcomes

CONCLUSION

A perfect study planner is not the
most complex one –
it is the one that is simple, clear,
and used consistently.

THANK YOU FOR YOUR ATTENTION!
